

Assassin 750

Assassin 750 is a highly effective defoaming liquid for use in various waste water treatment applications, specifically in paint sludge systems. The product is capable of defoaming surface foam as well as entrained air that can add unwanted volume to a system.

Features and Benefits

- Long term effectiveness
- Better equipment operation.
- Lower surface foaming.
- More compact sludge production.
- Fewer particulate emissions up the stacks
- Will not clog filters or block lines

Typical Properties

Appearance	Opaque liquid
Bulk Density	8.1 lbs./gal.
Solubility	Dispersible in water
Flash point	None to boiling
V.O.C. Content	Negligible
Freeze Point	32° F

Application Procedure

Assassin 750 defoamer should be metered into your system at a rate no faster than is necessary to control any foam. In some systems foam may only occur at irregular and unexpected intervals. In cases such as this the product is often added by manual sprayer to the surface of the water or by manually pouring a small amount into the water. Your American Enterprise Industries representative will advise you on the proper use.
