

E-Z Peel FG

E-Z Peel FG is a peelable water-based pigmented coating used to protect floors in the paint shop from tacking and paint accumulation. The product forms a uniform gray coating which can be peeled from surfaces in large sheets. E-Z Peel FG dries very quickly and can be applied by spray, brush or roller.

Features and Benefits

- Can be applied by spray, brush or roller
- Designed to be peeled from in large sheets
- Contains no suspect carcinogens

Typical Properties

Appearance	Gray, viscous liquid
Bulk Density	10.3 lbs./gal.
Solubility	Completely water dispersible
Flash Point	None to boiling
V.O.C. Content	Negligible

Application Procedure

E-Z Peel FG is normally applied by airless spray system using a tip with a large aperture and a moderate angle. The product can also be applied with a large nap roller to provide a textured surface to provide extra traction. Once applied, E-Z Peel FG dries to a non-tacky, non-chalky film. The coating can be reapplied daily or weekly, depending on tracking and paint buildup. The coating should not be removed before at least five layers have been applied. To remove, simply score the film and lift a corner off the wall. The overspray, coated film should lift off the wall in large sheets to be disposed of according to government regulations concerning paint waste.
