

Snowwhite 65

Snowwhite 65 is a water-based pigmented coating used to coat grates for protection against heavy accumulations of paint overspray. This product is a white, durably hard grate coating that assists in the complete removal of accumulated overspray when using a high pressure grate washer (SpinJet) or lawn mower).

Features and Benefits

- Thixotropic nature allows for easy spraying
- Designed to be washable with high pressure water
- Contains no suspect carcinogens
- Will not interfere with most paint detackification processes
- No Diethanolamine

Typical Properties

Appearance	White, viscous liquid
Bulk Density	11.2 lbs./gal.
Solubility	Completely water dispersible
Flash Point	None to boiling
Viscosity	3,000 - 6000 cps @ 75 °F
V.O.C. Content	None
pH	9.8

Application Procedure

Snowwhite 65 is normally applied by airless spray system using a tip with a large aperture and a moderate angle. The product is simply sprayed until the grate is coated completely on top and sides. Once applied, Snowwhite 65 dries to a hard, chalk resistant film that stands up under most traffic situations. The coating remains in place during production hours and is be rinsed off with high pressure water during third shift. Best results are obtained when using a "lawn mower" type high pressure device, such as the NLB SpinJet models.
